

SeeMBox -V[©]

REAL TIME MONITORING UTILIZING DISRUPTIVE TECHNOLOGY

A complete solution

for accurate monitoring of your fleet in real-time allowing for performance improvement, efficient proactiveness and cost reduction!

SeeMBox-V[®]

The 3 Steps to vessel's Efficiency

MONITOR-ANALYZE-IMPROVE

Monitor: The ultimate universal acquisition platform & the state-of-the-art comprehensive monitoring tool

Analyze: Powerful & dynamic trend analysis & historical data evaluation vs prototypes

Improve: Convert analytics to decision support information

The Solution

HOW IT WORKS

SeeMBox-V[®] is a hardware-software combined solution for the acquisition, visualization & recording of data from any possible source of information on a vessel. Independent from vendors & makers, SeeMBox-V[®] is a modular solution that may integrate readings from any system into one common, user friendly and unique interface. Additionally, it is a holistic solution for vessel efficiency in identifying malfunction causes, in observing machinery behavior as well as vessel's operational performance.

ACCURATE DECISION SUPPORT

BASIC FEATURES

- Real time monitoring & visualization with lowest bandwidth requirement in Industry
- Powerful, interactive Mimics
- Extensive reporting & integration with 3rd party applications
- Event module triggers automatic alerts
- Performance KPIs
- Integrated Fuel Consumption and Bunkering monitoring modules

BENEFITS

- Constantly updated information repository allows easy trend analysis
- Eliminates human intervention thus enabling accuracy & efficiency
- Enables the prediction of probable malfunctions which reduces maintenance costs & provides a clear view of complex conditions that may affect the vessel's performance
- Historical data enables tracking of conditions that possibly led to malfunctions
- Allows a baseline for monitoring and sustaining any type of SEEMP that may be implemented.
- SeeMBox-V MRV module independently verified in terms of process and functionality by Verifavia
